

PACKAGED EMI FILTERING

FILTER MODULES

Purpose-built filter modules for clean subsystem integration.

RCV INTERCONNECT

ONE OF THE SHORTEST LEAD TIMES IN THE INDUSTRY

ENGINEERED AROUND YOUR REQUIREMENTS

RCV filter modules package multiple filtered circuits into an application-specific mechanical assembly. They provide a centralized filtering approach when connector-level filtering does not fit the architecture or multiple interfaces must be managed together.

CONFIGURATIONS

- Multi-circuit filter assemblies
- Custom electrical configurations
- Application-specific housings
- Connector, lead or PC-tail interfaces

APPLICATIONS

- Power and signal distribution
- Avionics enclosures
- Communications subsystems
- Defense electronic assemblies

KEY ADVANTAGES

- Centralized filtering architecture
- Simplified subsystem integration
- Custom packaging and interfaces
- Scalable circuit-count options
